

Top 5 Global Investment Bank selects Apparity to implement enterprise class End User Computing Inventory Management and Risk Assessment Solution.

October 17th 2016, Atlanta Georgia, Apparity, LLC the proven leader in End User Computing solutions announced today that it has entered into a contract to provide one of the top 5 investment banks with a state of the art EUC Inventory Management System, deploying to over 40 countries worldwide.

The Apparity Inventory Management System (AIMS) will replace an existing 'home grown' system that was originally designed to integrate into a legacy spreadsheet management and controls system. The legacy system was inaccurate, unable to scale and was abandoned in favor of the Apparity solution.

The AIMS solution is designed to provide all EUC end-users and managers with the ability to risk rate and maintain a record of all the information an organization considers important when tracking active EUC's. As a core component of the Apparity technology stack, AIMS can operate standalone or as an integrated part of the complete Apparity EUC Management technology stack.

Running in a production environment the investment bank can now track and monitor all key end user applications, regardless of application type, spreadsheet, access database, and custom code and provide governance personnel with a real time risk insight into all EUC's that impact the banks bottom line.

About Apparity, LLC

Apparity, LLC provides Enterprise Content Management (ECM) software solutions for End User Computing to companies within highly regulated industries. The Apparity technology securely monitors and assists with all material events that occur in the lifecycle of a mission critical End User Application, regardless of application type, without interfering with content or existing Excel® operations.
