

Apparity launches GRC application integration to automate EUC management control updates.

Atlanta Georgia, February 22nd 2017, - Apparity, LLC the global leader in End User Computing (EUC) Risk Management announced today that it has entered into a contract to provide and support 'on-demand' integration into the IBM OpenPages GRC Management platform.

The Apparity base product solution has been updated to provide both automated updates to EUC centric risk and compliance controls and processes that typically rely on the manager or end user to validate as well as allowing EUC related metadata held within the GRC application to populate key fields during the Apparity 'Onboarding' process.

The cost and time benefits of this level of integration to the highly regulated enterprise are immediate. GRC control record updates are now timely, accurate and directly linked to those Apparity managed EUC's involved in the financial reporting and accounting business cycles that Apparity monitors and manages. Moreover, because the organizational 'metadata' associated with the EUC's is now shared / synced between the GRC application and the Apparity system, the business is assured a complete, 365 degree view into EUC risk and control compliance.

About Apparity, LLC

Apparity, LLC provides Enterprise Content Management (ECM) software and support for End User Computing to companies within highly regulated industries. The Apparity technology securely monitors and assists with all the material events that occur in the lifecycle of a mission critical EUC, without interfering with the content or with the associated EUC business process operations.
