UK Specialist Insurer selects Apparity for Model Map Explorer Solution

London United Kingdom, July 28th 2017, - Apparity, LLC the global leader in End User Computing (EUC) controls announced today that it has entered into a contract with a UK based insurance company to implement the Apparity Model Map Explorer solution as part of an enterprise wide EUC management and controls solution.

For companies working in the highly regulated insurance industry, Model Map Explorer is able to uniquely deliver the Input and Output controls essential to ensuring the 'fit for purpose' integrity of the models active in the actuarial and financial reporting functions.

Model Map Explorer is able to rapidly establish a complete picture of all currently active models and their 'interconnected' state. Users are then able to 'drill down' into a model's 'interconnected ecosystem' rendering a view that identifies all the files and data sources that provide inputs to the model in question and conversely all the files and data sources that are dependent on data output from the same model. Furthermore, in addition to the 360 degree view of the movement of data into and out of a model, Model Map Explorer allows the user to then expand the 'interconnected' view to include the data connections that impact all the associated, connected upstream and downstream models. In short, a powerful and accurate tool that is able to identify, visually map and manage the 'connected' risk associated with all the complex and high risk EUC models in a single company wide view.

The Apparity solution will be deployed enterprise wide and will be responsible for maintaining an accurate inventory of all the models that exist within the firm as well as ensuring that the appropriate access, version and change management controls are implemented. The integrity of the models registered to the Apparity inventory system will be then further assured with the real time view into the status of the 'connections' into and out of the models provided by the Apparity Model Map Explorer solution.

About Apparity, LLC

Apparity, LLC provides Enterprise Content Management (ECM) software and support for End User Computing to companies within highly regulated industries. The Apparity technology securely monitors and assists with all the material events that occur in the lifecycle of a mission critical EUC, without interfering with the content or with the associated EUC business process operations.
