

One of America's largest banking organizations selects Apparity to provide integrity controls and governance for key spreadsheets and models.

Atlanta Georgia, February 3, 2017, - Apparity, LLC the global leader in End User Computing controls announced today that it has entered into a contract to provide a comprehensive spreadsheet integrity, controls and model change management solution to one of North America's largest banking corporations.

The Apparity platform will be deployed across key operational and regulatory spreadsheets worked on by multiple departments that collectively provide the key metrics, statistics and data demanded by regulatory filings and financial reporting to the market.

A critical component of the Apparity solution will be the implementation of the Integrity and Audit functionality. The Apparity Integrity and Audit solution is designed to ensure that all significant errors and problems with the correct functioning of a spreadsheet model are identified and remediated. In addition, once remediated and baselined, the Apparity File Tracking technology ensures all spreadsheets are then monitored for change regardless of what name they are given, where they reside, who saved them or where they been saved.

Because the Apparity system does not interfere with the way a user works with their spreadsheet the business cycles that are reliant on the output of the spreadsheet remains unaffected. In addition, because Apparity is always tracking user access and spreadsheet content change then the process for approving significant changes and compliance reporting is streamlined and accurate.

About Apparity, LLC

Apparity, LLC provides Enterprise Content Management (ECM) software and support for spreadsheets to companies within highly regulated industries. The Apparity technology securely monitors and assists with all material events that occur in the lifecycle of a mission critical spreadsheet, without interfering with content or existing Excel® operations.
